1 Regulatory / Compliance Documentation Version

Material Name: Gastroenterology – Acid Reflux – Drug PN 21

This material refers to a pharmaceutical drug indicated for the treatment and management of **acid reflux (Gastroesophageal Reflux Disease – GERD)** within the therapeutic area of **Gastroenterology**. The product identified as **Drug PN 21** is intended for use in accordance with approved prescribing information and applicable regulatory guidelines.

The drug functions by **modulating gastric acid secretion or activity**, thereby reducing esophageal exposure to stomach acid and minimizing mucosal damage. Depending on its approved classification, the drug may act as a proton pump inhibitor, H2 receptor antagonist, antacid, or prokinetic agent.

Drug PN 21 is indicated for patients experiencing symptoms such as heartburn, acid regurgitation, and esophageal irritation, and may also be prescribed for the prevention and treatment of acid-related complications, including erosive esophagitis and peptic ulcers.

All usage, distribution, and promotion of this material must comply with local and international regulatory standards, including labeling, safety, and pharmacovigilance requirements.

2 Training / Internal Learning Version

Material Name: Gastroenterology – Acid Reflux – Drug PN 21

This drug material focuses on the treatment of **acid reflux**, a common gastrointestinal condition caused by the backward flow of stomach acid into the esophagus. Acid reflux can lead to symptoms such as burning chest pain, sour taste, difficulty swallowing, and long-term esophageal damage if left untreated.

Drug PN 21 is designed to help manage these symptoms by **reducing stomach acid production**, **neutralizing acid**, or **improving digestive movement**, depending on the drug class. It is commonly used in both short-term symptom control and long-term disease management.

Key learning points for this material include:

- Understanding the mechanism of acid reflux
- Identifying patient symptoms and treatment goals
- Knowing the drug's mechanism of action
- Recognizing appropriate usage and therapy duration

This material supports healthcare professionals and internal teams in understanding how Drug PN 21 contributes to effective gastrointestinal care.

3 Marketing / Promotional Content Version

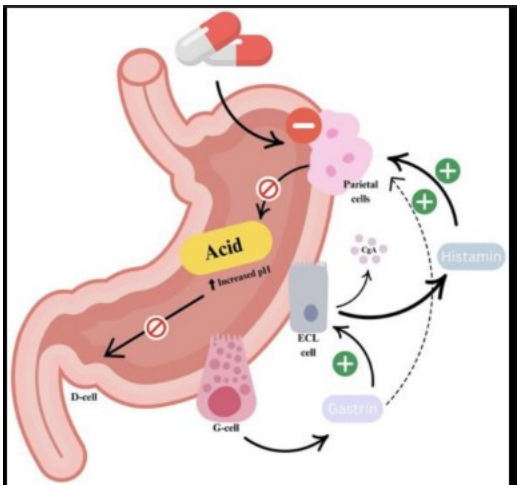

Material Name: Gastroenterology – Acid Reflux – Drug PN 21

Drug PN 21 is a targeted therapeutic solution developed to provide effective relief from **acid reflux and GERD-related symptoms**. Designed for use in gastroenterology care, the drug helps control excess stomach acid, offering patients lasting comfort and improved digestive health.

By addressing the root cause of acid reflux, Drug PN 21 supports:

- Rapid relief from heartburn and regurgitation
- Healing of the esophageal lining
- Reduced risk of long-term complications

This material highlights Drug PN 21 as a reliable treatment option for patients seeking consistent symptom control and improved quality of life. Its proven therapeutic approach makes it a valuable choice for healthcare providers managing acid-related gastrointestinal conditions.
